

2020 UNION

The Union follows suit to our design methods by being four tenths of an inch wider than a Vapor. This extra width gives skiers the chance to feel ultimate balance while learning to ski at a higher level. We challenge you to find a ski that is more fun to ride in open water.

TIP ROCKER

Starting the tip rocker directly at the end of the flat spot gives the ski more fluidity and makes the transition from turning to pulling seamless. More rocker in the tip helps the finish of the turn happen more quickly and with more stability.

FLAT SPOT

The flat spot is your balance point, by making this point right at the toes of your front foot you get a balanced place to stand at every single turn. This balance allows you to stand with confidence and make symmetrical turns on both sides of the course.

STRAIGHT LINES

Our unique straight lines allow the ski to be the fastest on the market. The lack of outside radius decreases drag and lets the ski flow with ease from side to side. In turn you're getting more cross course speed than any ski on the market.

ROCKER

Rocker defines the pivot point on a ski; for 2019 we've moved that contact point closer to the ball of your front foot, which helps the ski pivot easier. The tight radius quick turns are then balanced with our new tail rocker lines that add tail support off the buoy, giving you the ability to build more speed from a wider point.

ROCKER

At four tenths of an inch wider than the Vapor the width of the Union creates ultimate stability. This bigger overall profile allows a skier to ski in control without the risk of the ski rolling to far on edge and making them lose their balance.
