

### **SKI DESIGN**

At Radar we believe in building a ski that carries constant speed and moves through the water efficiently. There are 5 main characteristics of waterski design that contribute to how a waterski functions on the water. The following is a brief description of those main design characteristics and what they do for your ski.

#### SHAPE

The shape or outline of the ski is the single most important design characteristic. It controls the planing attitude of the ski, the ski's turning radius, contributes to where the ski generates lift, and is a major player in where you stand on the ski. As width and length of a ski are increased, surface area of the ski is also increased. The distribution of surface area plays a large role in how a ski comes up to plane and the resistance the skier feels to the water around them when saying, "Hit It!". Once the ski has reached skiing plane, the shape determines the pressure points of the ski (think front of ski engagement or tip pull). This changes how much the tail can hold or slide, the attack angle the ski gets through the wakes, the amount of drag that is felt from water friction, and provides the natural area where the skier stands on the ski.

### ROCKER

The rocker of the ski is the curvature of the bottom surface. Many of today's skis go with a multi-stage rocker line where there is a flat spot under the skier's front foot and rocker ahead of and behind this flat spot. The more rocker is added the more pressure is relieved from the running surface. Increased rocker equals quicker turns but at the sacrifice of side-to-side drive and a smaller sweet spot. As the flat spot of a ski is extended, the ski increases its ability to hold angle in relation to the boat and provides an easier balance point but creates a larger turning radius.

### CONCAVE

All waterskis utilize a concaved bottom surface to direct water flow length-wise underneath the ski. This cupped shaped surface traps water under the ski which creates a lifting element and also creates a lipped area where the concave meets the skis bevels, adding a grip element. A ski with no concave on the bottom surface would sit very deep in the water and feel very slippery, lacking the ability to hold side to side direction well. The deeper the concave, the more the skier can stand or push on the ski without it going too deep in the water. This is helpful to make the front of the ski more stable and forgiving. On the other hand, too much concave and the ski will ride so high in the water that it becomes too difficult to control. One other important aspect of concave is that it introduces drag into the equation. Drag is inefficient, but some is necessary to help the skier slow down prior to the turn.

This is the curved area connecting the concave to the sidewall of the ski. Bevels affect lift, grab, roll, bite, and slide of the ski. In general, the rounder the bevel is the less water it may grab or harness, allowing the ski to roll more fluidly side to side with the downside of less ability to hold angle. In opposition, sharper, more angled bevels hold more angle, but require more skier manipulation to create tight turns. Also, the side of the bevel affects how deep a ski will sit in the water. The larger the bevel, the deeper the ski will sit in the water and vice-versa.

### THICKNESS

Ski thickness is measured from the bottom of the bevel to the top surface. The thicker a ski gets, the higher on the water it will ride. Typically, the front half of a ski is thicker than the rear. This allows the front of the ski to be propped upward while also allowing the tail of the ski to ride deeper through the water allowing for hard turns where the tail of the ski does not blow out of the water. Flex and edge angle are also affected by thickness, where as a ski becomes thicker it becomes more stiff and harder to roll over, and as a ski becomes thinner it has a softer flex and is easier to roll onto edge.

All of these characteristics affect the way the ski rides in their own way and we have worked tirelessly to bring you the precise blend of those elements.

### PMI

PMI Foam is the industry leading core with its lightweight, reactive qualities. The use of PMI results in a ski that rebounds back to its original shape at a rate 10x faster than PVC which means quicker turns and an earlier acceleration out of the turn.

### PVC

PVC has been an industry staple for well over a decade. It is trusted and proven as a core because of its long-lasting strength and quick response. PVC foam revolutionized skiing in the 2000's and remains a force to this day.

### **AERO CORE**

Aero Core is our exclusive formulation of polyurethane foam. With an amazingly high strength-to-weight ratio these skis sit deeper in the water for a forgiving, consistent ride.

### **ALL-TERRAIN CORE**

Our All-Terrain Core is the most forgiving construction we offer. A polyurethane core with Paulownia wood stringers allows the ski to cross the wakes with ease and initiate turns automatically.

### **TEXTREME**

Textreme is a manufacturer of a spread tow carbon which allows us to reduce weight and increase strength. It most importantly provides us a more consistent flexing and a durable ski. Textreme has been utilized in everything from America's Cup race boats to Tour de France bikes because of its powerful attributes.

TRICK

TUBES/LEISURE
ACCESSORIES

### INNEGRA

Innegra is a dampening fiber that reduces vibration and increases strength. Innegra is woven into the Textreme to improve the performance and durability of the ski. Innegra is also utilized in many Formula 1 race cars because of its incredible strengthening and dampening attributes.

### **CARBON RODS**

Carbon Rods allow us to introduce Zonal Flexing. These hollow tubes create stiffness and strength in the ski where it is necessary without creating change in unwanted places.

### **SIGMATEX CARBON**

Sigmatex is an industry leader in the carbon fiber world. Their looming process is computer controlled giving them the ability to use ultra-high modulus carbons with complete precision.

### **CPD BIO RESIN**

CPD has created a plant-based bio resin that is changing the game. Utilizing a biofuel base that has 28% renewable resources allows them to create a resin with the same molecular makeup as a traditional resin. This means the same strength and performance that you are used to all while saving the planet, now that's a win-win.

#### **RACE BASE**

Utilizing a TPU base material reduces drag and increases waterflow. This allows the ski to carry more speed behind the boat resulting in earlier lines and easier turns in the slalom course.

### ENDURO TIP/TAIL

By introducing a nylon block in both the tip and tail of our Vapors we have increased durability and made the water flow more efficiently.

The Vapor reigns supreme when it comes to feel on the water. For 2022, we created a ski that feels truly automatic in the turns. Simply ride the line out to apex, release a hand, turn, and off you go to the other side. The ski can be turned from any position and has led skiers to say there's no sweet spot, rather an infinite area to make incredibly tight turns. More side-to-side power combined with these automatic turns yields a softer, more flowy overall feel than any ski we've produced to date. The balance this ski creates allows a skier to make mistakes yet still move the ski underneath them to maintain speed and direction. This entirely new shape for 2022 will have you running earlier lines than you ever imagined; just rip and repeat.

### **SHAPE**

The wide spot on the ski has moved forward and width has been added from the middle of the ski through the tip. This gives the ski a more tip to tail taper and more support through the front part of the ski. The increase in taper presents the ski with a slightly more tip-up riding attitude and allows the ski to pull through the turn in a more connected, powerful way. The result is less body movement needed to get tight radius turns. The new ski also has slightly less volume in the tail. By reducing this surface area, the tail of the ski is able to smear outward while also staying planted in the water. Ultimately, the updates in shape help it to ride much closer to the ideal line for any given speed and rope length.

### ROCKER

The tip rocker on the new Vapor starts just after the wide spot. This relieves tip pressure and increases forgiveness, allowing a skier to have a bigger platform to stand on coming into the turn. This also helps keep the ski keep moving outbound in the transition and makes the ski incredibly more predictable in the turns it creates. Moving back from the wide spot, the rocker lines are all new. These new lines create a ski with increased tail rocker which softens the way the ski rotates or carves through the turn. The result is a feeling of increased angle from a wider place with an instant acceleration.

### CONCAVE

The additional concave depth running throughout the bottom of the ski is one of the most noticeable differences in this new shape. This channels more water directionally from tip to tail, resulting in significantly more side-to-side drive and holding power. More drive and hold allow a skier to be faster as they near centerline which results in a more up-course path. Another result from an increased concave is increased pressure on the bevels, allowing the ski to feel extremely connected to the water. This gives a skier the freedom to control the path of the ski with more ease.

### **BEVELS**

The front of the ski carries a sharper, more angular bevel design to harness the increased water flow from the new concave design. This gives the skier more ability to feel how the water interacts with the tip of the ski to create sharper, more predictable turns. In the tail of the ski, the bevel is softened, allowing the water to wrap around the bevel easier. The tip of the ski pulls harder through the turn while at the same time, the tail is able to smear while staying planted in the water. This feathered approach makes the turns feel much more natural and less forced.

### **THICKNESS**

Sidewall height carries constant to provide balance for the increased lift created by adding width. In an effort to keep the ski nimble, sidewall thickness is reduced to produce the connected, tight turning radius of the ski.

#### **EDGE ANGLE**

The Vapor width allows the ski to achieve maximum edge angle both in the turn and while cutting. This width sets the precedent in our line as the pinnacle of performance both in the course and while free skiing.

### PRO BUILD

Pro Build designates a PMI Core and Textreme Carbon infused with Innegra. PMI is the lightest and most responsive foam money can buy, allowing a skier to get more attainable angle out of the turn and have the ability to hold it through the wakes. Textreme lets the ski flex instantly and consistently, giving the skier more speed from a wider point. Overall, the ski will feel like it is carrying constant speed from the first cut to the last turn which results in the most effortless ride we've found to date.

### **FEATURES**

- + PMI Core Lightweight, high density, most response.
- $+\ Textreme\ Carbon-Lighter,\ stronger\ composites.$
- + Innegra Reducing chatter for a more stable ride.
- + Carbon Rods Zonal flex for the optimum layup.
- + Bio Resin Plant based and better.
- + Race Base Earlier lines and easier turns.
- + Enduro Tip/Tail Built for speed.
- + Radar Lab Made Thanks Herb.

### PRO BUILD

The Pro Build Vapor is everything a competition skier ever wanted, designed to perform between 32-36 MPH and in the slalom course to elite levels. It's our Pro Team's model of choice but is also great for those looking to improve their skills at any level. By riding a Pro Build Vapor you ensure that you have the best materials wrapped into the best shape on the market. Now all you have to decide is which color you like best.

#### **FEATURES**

- + PMI Core Lightweight, high density, most response.
- + Textreme Carbon Lighter, stronger composites.
- + Innegra Reducing chatter for a more stable ride.
- + Carbon Rods Zonal flex for the optimum layup.

### LITHIUM

Built from the same mold as our Pro Build, the Lithium features our Vapor shape with a PVC Core. PVC has stood the test of time and is proven as a high-quality core material. An amazing ski at a more affordable price, a win-win in every sense of the term. The Lithium construction is built to be a course ski between 30-36 MPH and is fully capable of ripping anything from 15-41 off, get after it!

### **FEATURES**

- + PVC Core Tested and proven response.
- + Sigmatex Carbon Consistent flex every time.
- + Bio Resin Plant based and better.
- + Race Base Earlier lines and easier turns.
- + Enduro Tip/Tail Built for speed.

69.5	200+ / 90+	394.05	7.21

### **GRAPHITE**

The Graphite Vapor features a polyurethane core in the body of a Vapor. Polyurethane is damper foam which allows the ski to sit a little deeper in the water and makes for more progressive turns. Those skiing in a mix of open water and slalom courses favor the Graphite construction between speeds of 30-36 MPH.

# THE SENATE

The Senate's ability to carry speed is unmatched in the industry. This speed allows the skier to maintain width on the boat ultimately giving a sense of freedom sought after by those that ski in the course as well as those ripping open water turns. By taking our Vapor shape and adding two tenths of an inch in extra width we have created a stable riding platform. This platform creates the balance needed for a skier to feel at home, while the profile of the ski allows the skier to feel the speed and angle sought after at any level.

### ROCKER

The tip rocker on the new Senate starts just after the wide spot. This relieves tip pressure and increases forgiveness, allowing a skier to have a bigger platform to stand on coming into the turn. This also helps keep the ski keep moving outbound in the transition and makes the ski incredibly more predictable in the turns it creates. Moving back from the wide spot, the rocker lines are all new. These new lines create a ski with increased tail rocker which softens the way the ski rotates or carves through the turn. The result is a feeling of increased angle from a wider place with an instant acceleration.

### **BEVELS**

The front of the ski carries a sharper, more angular bevel design to harness the increased water flow from the new concave design. This gives the skier more ability to feel how the water interacts with the tip of the ski to create sharper, more predictable turns. In the tail of the ski, the bevel is softened, allowing the water to wrap around the bevel easier. The tip of the ski pulls harder through the turn while at the same time, the tail is able to smear while staying planted in the water. This feathered approach makes the turns feel much more natural and less forced.

#### **EDGE ANGLE**

At two tenths of an inch wider than the Vapor, the width of the Senate allows the ski to roll on edge at a moderate level. This width allows a skier to progress with ease as they instantly feel the balance and control of the bigger riding platform.

### SHAPE

The wide spot on the ski has moved forward and width has been added from the middle of the ski through the tip. This gives the ski a more tip to tail taper and more support through the front part of the ski. The increase in taper presents the ski with a slightly more tip-up riding attitude and allows the ski to pull through the turn in a more connected, powerful way. The result is less body movement needed to get tight radius turns. The new ski also has slightly less volume in the tail. By reducing this surface area, the tail of the ski is able to smear outward while also staying planted in the water. Ultimately, the updates in shape help it to ride much closer to the ideal line for any given speed and rope length.

#### CONCAVE

The additional concave depth running throughout the bottom of the ski is one of the most noticeable differences in this new shape. This channels more water directionally from tip to tail, resulting in significantly more side-to-side drive and holding power. More drive and hold allow a skier to be faster as they near centerline which results in a more up-course path. Another result from an increased concave is increased pressure on the bevels, allowing the ski to feel extremely connected to the water. This gives a skier the freedom to control the path of the ski with more ease.

#### **THICKNESS**

Sidewall height carries constant to provide balance for the increased lift created by adding width. In an effort to keep the ski nimble, sidewall thickness is reduced to produce the connected, tight turning radius of the ski.

### PRO BUILD

PMI foam is undoubtedly the lightest, most responsive foam on the market. We wrap that foam in Textreme spread tow carbon to make this Senate the fastest, most aggressive Senate we've ever created. Now those skiing 28-34 MPH in the course truly have a racecar of a Senate to write home about.

### **FEATURES**

## THE UNION

The Union follows suit with our design methods by being four tenths of an inch wider than a Vapor. This extra width gives skiers the chance to feel ultimate balance while learning to ski at a higher level. We challenge you to find a ski that is more fun to ride in open water.

#### TIP ROCKER

Starting the tip rocker directly at the end of the flat spot gives the ski more fluidity and makes the transition from turning to pulling seamless. More rocker in the tip helps the finish of the turn happen more quickly and with more stability.

### **STRAIGHT LINES**

Our unique straight lines allow the ski to be the fastest on the market. The lack of outside radius decreases drag and lets the ski flow with ease from side to side. In turn, you're getting more cross course speed than any other ski on the market.

#### **EDGE ANGLE**

At four tenths of an inch wider than the Vapor the width of the Union creates ultimate stability. This bigger overall profile allows a skier to ski in control without the risk of the ski rolling too far on edge and making them lose their balance.

### **FLAT SPOT**

The flat spot is your balance point, by making this point right at the toes of your front foot you get a balanced place to stand at every single turn. This balance allows you to stand with confidence and make symmetrical turns on both sides of the course.

### ROCKER

Rocker defines the pivot point on a ski; we've moved that contact point closer to the ball of your front foot, which helps the ski pivot easier. The tight radius quick turns are then balanced with our tail rocker which adds support off the buoy, giving you the ability to build more speed from a wider point.

### UNION

MEN'S

The Union is the undisputed favorite around the Radar Headquarters due to its easy to ride ability without sacrificing any performance. Extra width allows you to ride the ski at slower speeds and improve at a rapid pace. This ski performs amazingly well between 24-32 MPH and will have you making endless turns on the lake all day long.

### **FEATURES**

- + All-Terrain Core Most forgiving construction.
- + 100% Carbon Fiber Consistent flex every time

TERRAIN CROSSOVER

SPEED RANGE 24-32 MPH / 40-52 KPH

67	130 – 190 / 59 – 86	393.18	7.35

# WATER

Our Open Water series allows skis with more volume to ski at a high level with superior balance and support. It's undeniable that surface area is your friend in skiing, it pops you out of the water with ease and it gives you the ability to float on top of the water. That surface area matched with our flat spine and the next evolution of Grip Rails has resulted in a ski that's even easier to ride and has less drag. The Sessions and Terrain will change the way you view a sheet of glass, go rip it up!

**STRAIGHT LINES** 

The straight lines built into the Open Water series allow the ski to carve more continuously and let the ski roll on edge more naturally. This combined with our updated grip rails make for the most effortless and smooth lines you've ever dreamed of skiing.

### **FLAT SPOT**

Open Water skis sport an oversized flat spot which allow the skis to autolevel. Skiers of any ability level can hop on a Session or Terrain and feel instantly at home due to its balance on the water.

### **LEVEL SPINE**

Open Water skis have a flat spine directly down the center of the ski. This allows water to flow cleanly down the center, reducing drag and making it possible to make endless turns without tiring out.

### **GRIP RAILS 2.0**

The evolution of our grip rails was aimed to allow the ski to engage much easier. These angled rails also force water to the center of the ski increasing lift and decreasing drag. What you'll feel is effortless flow and ease of turning.

### **TERRAIN**

The Terrain is ready for any adventure you want to throw at it. Its straight lines allow the ski to flow and carve with ease. This makes it ideal to carve in open water or take into the course for those looking to kick things up. 100% carbon laminates combined with our unique shape make this ski light and easy to maintain speed.

### **FEATURES**

- $+ All \hbox{-} Terrain \ Core Most for giving construction. \\$
- + 100% Carbon Fiber Consistent flex every time.
- + Grip Rails 2.0 Allowing your ski to engage with ease.

TERRAIN CROSSOVER

**SPEED RANGE** 24-32 MPH / 40-52 KPH

69	175 – 230 / 79 – 104	433.63	7.72

### **SESSION**

### MEN'S

The Session was built with stability and ease in mind. With more surface area than we've ever created, getting out of the water is a breeze and once you're up, you'll feel like you're floating with the level spine and grip rails reducing drag. Our All-Terrain construction makes crossing wakes and rougher water simple and smooth. Like all Radar Skis the Session is built with 100% carbon laminates.

### **FEATURES**

- + All-Terrain Core Most forgiving construction.
- + 100% Carbon Fiber Consistent flex every time.
- + Grip Rails 2.0 Allowing your ski to engage with ease.

### SESSION

### WOMEN'S

If you want a ski that makes deep water starts a breeze, is balanced and stable when you're cruising, and progressively rolls on edge for continuous turns all the way down the lake, then you need a Session. This ski is designed to ride between 20 and 30 MPH in the open water and is guaranteed to leave you with a smile on your face!

### **FEATURES**

- + All-Terrain Core Most forgiving construction.
- + 100% Carbon Fiber Consistent flex every time.
- + Grip Rails 2.0 Allowing your ski to engage with ease.

## THE GRAVITON

In trick skiing, speed is the name of the game. We've worked hard to create a ski that moves from trick to trick faster than anything else on the market. The Graviton has one clean radius allowing the ski to carve smoother and roll on edge faster, making the ski drive faster to the next trick. The rocker profile, with a smaller flat spot, gives the ski the ability to spin effortlessly on toe tricks and gives it a cleaner water flow out the tip and tail for smoother loadings. Combining this with the CorFlex, GNR rails and concave in the tip and tail allows the ski to flex in the correct areas and makes the rope rock tight on landings to move to the next trick faster.

#### **SIDECUT**

The sidecut lines of the Graviton have one smooth radius from the center section of the ski through the tip and tail. This gives the ski a smoother carve to the wake after you land a trick and lets the ski roll on an edge easier, allowing you to travel back to the wake faster. The width of the ski has been made slightly narrower, making it nimbler from edge to edge. This also allows the ski to sit deeper in the water, which makes landings easier and forces the line tighter so you can move from trick to trick quicker.

#### **CENTER MOUNT INSERTS**

This is the first truly center mounted trick ski for hand tricks. We have added two binding locations for the front boot. The forward location is for hand tricks only. It moves both feet to the center of the ski instead of having the front boot in the middle of the ski and the back foot closer to the tail. This allows the skier to stand over the ski without excessive forward pressure. Body overs and spin tricks are much easier when the skier is perfectly centered. Now cutting to the wake from the forward or reverse position is equally simple. The front boot location puts the ankle bone on the center line of the ski with a traditional half inch adjustment either way. The neutral insert location is best for toe tricks as it allows the ski to swivel on a central balance point when a back foot is not located on the ski.

### **ROCKER**

The rocker profile has a slightly shorter flat spot and a little more rocker in the tip and tail. The shorter flat spot allows the glide speed of the ski to be greater which in turn gives the skier a sensation of a lighter ski. The reduced contact to the water also yields faster surface turns in both hand and toe tricks. More rocker in the tip and tail reduces suction ultimately leading to a cleaner pop off the wake every time.

### **CORFLEX**

The CorFlex found in the tip and tail ensure the ski flexes in these zones when load is applied at a gradual rate allowing you to control how much load is desired depending on the trick. When you load the ski for a body over, toe step or flip, it is comparable to loading a trampoline mat; this stored energy translates into more line load and more pop. Like the trampoline, for a flip you need more bounce than spin and the CorFlex allows you to micro adjust the amount of load needed perfectly every time. Beginner trick skiers are also finding it useful to help "center" them if the lean is too far forward or back. Tournament skiers have noticed how easy it is to go straight up off the water, reducing costly unwanted travel.

#### TIP/TAIL TUNNEL

Decelerating at the finish of a trick costs a skier time. We wanted to speed this process up to save skier's time between tricks. The tip and tail tunnels create the right amount of suction on a landing to make the rope rock tight. This cuts down the skier's need to decelerate. When the rope is tighter on landings you can commit to land on edge and go into the next trick because you know the rope will be there. We have seen a big savings in time in a flip sequence as well as the end of the toe pass in the toe step sequences. Tighter rope equals faster runs!

### **GNR RAILS**

The rails in the bottom of the ski are a more effective take on the traditional two grooves cut into the bottom of the ski. The grooves provide some traction but also create air and instability with the sharp edge. The GNR rails have 2x the tracking power to make the ski roll to edge and also deliver the pull smoothly and without the grabby feeling a sharp edge has. The GNR rails are the horsepower you can now use with the tighter rope the tunnels have delivered.

VESTS
GLOVES
ROPES/HANDLES
COMBOS/KNEEBOARDS
TUBES/LEISURE

### **GRAVITON**

The Graviton pops clean off the wake, lands soft and moves easily from one trick to another. This is all made possible through CorFlex and a tip and tail tunnel, as well as our GNR Rails. All these updates have resulted in a ski that leaves you with a tight rope and the ability to fly through your run.

### **FEATURES**

- + PVC Core Tested and proven response
- + Textreme Carbon Lighter, stronger composites
- + CorFlex Perfect flex for clean pop and soft landings.
- + Radar Lab Made Thanks Herb

Radar boot design has always been focused on improving your on-water experience through innovation and cutting-edge comfort. By utilizing a hybrid structure, we are able to build a boot that truly wraps around your foot creating an ultimate connection to the ski. This connection results in a lossless power transfer and allows you to feel immediate engagement on the water. Whether you're riding the premium Vapor boot, our high-end Pulse boot, the legendary Vector or our entry level Prime you'll feel the difference that comes with riding a Radar boot.

### **VAPOR CHASSIS**

The Vapor Chassis pushes the boundaries of boot technology by utilizing a three-part mold to form a rigid lower skeleton. This new design offers the control of a hard shell but stays true to our hybrid style by not sacrificing in the slightest when it comes to fit and connection to the ski.

### **PULSE CHASSIS**

The Pulse Chassis features reinforced 3D contours with integrated arch support. It also sports a wider fitting chassis than our Pro-Fit for a more comfortable ride.

**FOOTWEAR** 

GLOVES
ROPES/HANDLES
COMBOS/KNEEBOARDS
TUBES/LEISURE

### **FEATHER FRAME CHASSIS**

The Feather Frame Chassis stands on a pedestal as the only boot system to completely integrate the mounting system, baseplate and outer shell into a single component. This allows you to stand closer to the ski and offers a better connection.

### CARBITEX

Carbitex is a carbon fiber textile material that is more reactive than any other material on the market. This reactivity translates into an unparalleled connection to the ski.

### BOA

The Boa integration into the boots offers an instant response found only in the Radar line. Transform your experience through a fast, customizable, and comfortable fit.

### INTUITION

Our exclusive partnership with Intuition gives you a heat-moldable, lightweight, pre-formed fit. Intuition foam ensures you have a perfect fitting liner for ultimate performance.

### **WRAP TECH**

Wrap Tech fuses the external skeleton of the boot to the base textile layer which gives the boot the ability to conform to the shape of your foot, in turn giving you more response.

### VAPOR

The all-new Vapor boot rewrites what is possible in waterski footwear by creating the pinnacle in hybrid boot technology. For the first time a rigid lower skeleton is connected to a Carbitex upper cuff to create the perfect blend of connection and control. The rigid lower skeleton gives a skier complete control over the edges of their ski while the Carbitex upper cuff allows a skier to move over their ski with ease to find balance and connection to the water. A Boa dial completes the package to give a precise fit every single time. Anyone that's ever owned a Vapor boot in the past now has a reason to upgrade to our latest technology, strap it on and see for yourself the difference, skiing is believing.

### **FEATURES**

- + Boa Lacing System
- + Carbitex CX6 Upper
- + Fully Molded Lower Skeleton
- + Dual Density Intuition Liner

We take immense pride in creating the most comfortable fitting performance vests in the world. Whether you are wearing a Coast Guard Approved, CE Approved, or our impact jackets, we want to ensure you have something that fits you correctly. By utilizing premium materials and thought out cut lines we have created vests that bend and flex with you, resulting in a better experience on the water.

### TAILORED FIT

We design our vests to fit better by building them around a body form. This ensures that you get a snug, comfortable fit so you can think less about adjusting your vest and more about skiing.

### TAPERED FOAM

By tapering the foam from thick in the chest to thin in the waist we can control the mobility you have in a vest. This allows you to remain flexible and limber in our vests.

TRICK FOOTWEA

TUBES/LEISURE
ACCESSORIES

Siping our foam is what allows you to remain so free in a vest. This method of cutting the foam gives the skier more agility to move without restriction.

### **SMART SEGMENTATION**

The segmentation we choose in each vest is purposeful to enhance movement on a ski. Allowing a skier to move through a run is at our forefront when choosing cut lines.

### **WATER RESISTANT LINER**

Utilizing a water resistant liner in our vests gives them the ability to dry faster so you're not stuck with a wet life vest when it's your turn to ski again.

### **STRETCH FABRIC**

We build our vests with a combination of 2 and 4 way stretch materials so that we can keep them snug where they need to hold tight and stretch where they need to have elasticity.

### **FLEECE LINER**

The use of fleece in the arms and neck openings of our kid's vests ensure that they won't get chafing on those tender areas and the fleece lining throughout the inside of the Drifter guarantees a comfortable fit.

### X 3.0

The X 3.0 will undoubtedly become the gold standard in CGA life vests. It features unprecedented tapering of foam matched with unique segmentation to provide a precise fit so you're both comfortable and mobile all while staying perfectly buoyant!

- + Foam Floats
- + Vinyl Sleeves
- + 5 Section Mainline

;

### COMBOS

Combo skiing is the cornerstone to a future of enjoyment behind the boat. Making it easy for someone to learn how to ski is the key to them having fun and wanting to come back for more. Our collection of combo skis ensures anyone wanting to strap on a pair of skis and learn how to rip has a blast from the first time they drop into the water.

### X-CALIBER COMBOS

Surface area is buoyancy. Buoyancy is your friend. The X-Caliber combos are designed with high-end tech for the most efficient sidecut found in two skis. The additional surface area under foot adds stability and keeps the skis riding smoothly. These skis feature our renowned Cruise Boot for comfort and connection.

### **FEATURING**

- + Molded EVA Cruise Boot
- + Wide Profile Sidecut
- + Trainer Bar Included With 59" Pair

59", 67"

\$.....

### ORIGIN COMBOS

The Origin combos are made to get you up and on top of the water efficiently, in the most traditional manner. The narrower profile makes them nimble once on top. Sliding adjustable horseshoe bindings complete the package.

### **FEATURING**

- + Horseshoe Bindings
- + Progressive Profile Sidecut
- + Training Bar Included with 59" Pair

59", 67"

ċ			

### FIREBOLT COMBOS

The Firebolts are a scaled version of the X-Calibers, taking advantage of everything we expect from the skis designed for big kids behind the boat. A detachable stabilizer bar helps maintain proper ski spacing, improving balance and control while learning. Adjustable horseshoe bindings and a specially designed training rope with two handles (one for child and the other for the boat) complete the set.

### **FEATURING**

- + Color Me Marker Pack
- + Trainer Bar
- + Rope and Handle

COMBOS/KNEEBOARDS

### **KNEEBOARDS**

The Kneeboard, the summer classic that will never go out of style. We make three kneeboards that will be sure to handle anything you throw at them. From the compression molded, wake jumping, twin tip monster that is the Mission, to the fun and playful Hawk and Magic Carpet, you'll be stoked when you get done riding one of these boards.

### MISSION

This revolutionary shape makes edging a breeze and pops off the wake cleanly. Its twin tip technology allows it to be ridden forward or backward with ease. The state-of-the-art pad has knee wells and high angled footwalls that hold you in place under the strap like never before.

### **FEATURING**

- + Aero Core
- + Carbon Laminates
- + EVA Pad
- + Dual Locking Strap

ONE SIZE FITS MOST

\$

### HAWK

A narrowed tip profile and 3.2" swallowtail define the easy edging slalom style Hawk. Removing surface area from the tip allows the board to roll and hold on edge and the swallowtail speeds up turns and increases holding power. The retractable fins can give you the utmost grip when dropped down or loosen up the board when hidden.

### **FEATURING**

- + Durable Roto Shell
- + Recessed Pad
- + Single Locking Strap

ONE SIZE FITS MOST

\$

### **MAGIC CARPET**

Our modern kneeboard shape has a recessed EVA foam pad and single handle hook for the little ones to climb aboard. The design has increased surface area farther forward for stability and more pronounced molded in fins make it easy to ride.

### **FEATURING**

- + Durable Roto Shell
- + Recessed Pad
- + Single Locking Strap

ONE SIZE FITS MOST

\$\_\_\_

### **CHASE 2**

Pick a friend and get to tubing, the Chase 2 can be towed both directions and has a mount for a POV camera, so you can check the footage of your wipeout later!

### **FEATURING**

- + Spoon-O-Vation
- + Neoprene Seat Padding
- + Two Tow Points
- + POV Camera Mount
- + Neoprene Knuckle Guards
- + 420 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + 2 Cup Holders

2 Riders - 66" x 64"

### **CHASE 3**

The Chase 3 offers endless fun all summer long. With room for three you'll be laughing with your buddies as you bounce through the wakes and glide on a long whip. Spoon-O-Vation reduces the drag so you keep your speed and connect clean with the wake for maximum boost.

### **FEATURING**

- + Spoon-O-Vation
- + Neoprene Seat Padding
- + Two Tow Points
- + POV Camera Mount
- + Neoprene Knuckle Guards
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + 2 Cup Holders

3 Riders - 80" x 80"

### **CHASE 4**

There's room for the whole family on this tube. Whether your crew is out for a tube ride or you're tied up to the dock and putting the cup holders to good use, you'll be enjoying life on the Chase 4.

### **FEATURING**

- + Spoon-O-Vation
- + Neoprene Seat Padding
- + POV Camera Mount
- + Neoprene Knuckle Guards
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + 3 Cup Holders

4 Riders - 96" x 85"

ROPES/HANDLES

### **ORION 2**

Our classic Orion tube is a round adventure waiting to happen. Spoon-O-Vation allows this tube to carry speed and pop off the wakes!

### FEATURING

- + Spoon-O-Vation
- + Marshmallow Soft Top
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder

2 Riders - 60" Round

\$\_\_\_\_\_

### ORION 3

Our classic Orion tube in a bigger size. The world's most favorite tube now has room for one extra person!

### FEATURING

- + Spoon-O-Vation
- + Marshmallow Soft Top
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder

3 Riders - 75" Round

\$\_\_\_\_\_

### **INFLATABLES**

### **ASTRO**

The Astro is a crowd favorite with its nimble size. Easy to launch off the wake and even easier to maneuver, the Astro has a ton of bang for your buck.

### **FEATURING**

- + Spoon-O-Vation
- + Marshmallow Soft Top
- + 420 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters

2 Riders - 51" x 60"

### **LIFTOFF**

Our oversized deck tube provides fun for everyone. With a ton of surface area and side bolsters for support you can carry speed on a Liftoff like never before.

### FEATURING

- + Spoon-O-Vation
- + Marshmallow Soft Top
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters

3 Riders – 65" x 68"

### **FALKOR**

The Falkor is the latest addition to the Deck series and has room for the whole family. Pile on and let the fun begin!

### **FEATURING**

- + Spoon-O-Vation
- + Marshmallow Soft Top
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters

4 Riders - 76" x 100"

SKI

ROPES/HANDLES TUBES/LEISURE

### **VORTEX**

The tube that started it all, the Vortex remains a staple in our line as a classic tube that anyone can enjoy.

### FEATURING

- + Neoprene Knuckle Guards
- + 420 Denier Nylon Cover
- + 30 Gauge PVC Bladder

1 Rider - 48" Round

\$

### **UFO**

A classic tube with a modern twist. The UFO is an oversized donut tube with an inflatable seat cushion.

### **FEATURING**

- + Spoon-O-Vation
- + Neoprene Knuckle Guards
- + Inflatable Seat Cushion
- + 420 Denier Nylon Cover
- + 30 Gauge PVC Bladder

2 Riders - 64" Round

\$\_\_\_\_\_

### **TEACUP**

Our oversized classic, the Teacup is a playpen anyone can appreciate! With a bolster surrounding the entire tube you can sit secure and relax the day away.

### FEATURING

- + Spoon-O-Vation
- + Neoprene Knuckle Guards
- + POV Camera Mount
- + Inflatable Seat Cushion
- + Neoprene Seat Padding
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder

3 Riders – 79" x 92"

**5**\_\_\_\_\_

### EDGE 2

The Edge 2 is a rocking, rolling good time. The rolled-up corners allow you to whip high on the boat without ever catching the water.

### **FEATURING**

- + Spoon-O-Vation
- + Marshmallow Soft Top
- + 420 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters

2 Riders - 58" x 62"

\$\_\_\_\_\_

### EDGE 2

### EDGE 3

The Edge 3 is quickly becoming the favored tube among the Radar crew. With plenty of room for three, this tube offers tons of boost off the wake and enough speed to make you scream.

### **FEATURING**

- + Spoon-O-Vation
- + Marshmallow Soft Top
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters

3 Riders – 64" x 62"

\$.....

### **GALAXY**

Big doesn't always mean bulky, the oversized Galaxy has impressively low drag thanks to Spoon-O-Vation. Climb aboard the triangle of fun and see for yourself!

### FEATURING

- + Spoon-O-Vation
- + Neoprene Elbow and Knee Padding
- + Two Tow Points
- + Neoprene Knuckle Guards
- +840 Denier Nylon Cover
- + 30 Gauge PVC Bladder
- + Side Bolsters
